

Opera Mini

The smarter way to browse the mobile web

What is Opera Mini?

The revolutionary Opera Mini™ web browser goes where you go. Designed for speed and usability, Opera Mini provides remarkably fast browsing on nearly any mobile phone. It brings the Web to mass-market phones, while ensuring a great user experience.

Fast. Smooth. Secure.

The Opera Mini server transcodes webpage requests into an optimized format, compresses pages by up to 90 percent and sends them back to the handset, making it possible to access the Web on all types of mobile phones, including those with limited resources. With its small footprint and high level of usability, the Opera Mini browser provides a consistent user experience across a broad range of handsets.

Data usage made clearer

With a dedicated data-savings page, users are empowered with the knowledge of their actual data usage and savings when using Opera Mini to browse the mobile Web.

Operators

The Opera Mini browser enables operators to provide a high-quality browsing experience on a broader range of devices in their portfolio while managing data delivery costs, which, in turn, drives Internet service adoption.

Handset manufacturers/OEMs

OEMs can make their product portfolio more attractive to operators and consumers by including a powerful, user-friendly web browser on their devices.

Users

The Opera Mini browser empowers users to browse and interact with the Web easily at high speeds, with low costs, and the best usability. With the new data-savings page, users can take back control of their data usage, saving them time and money.

One user interface, any mobile phone

Features:

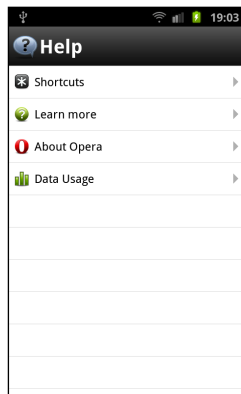

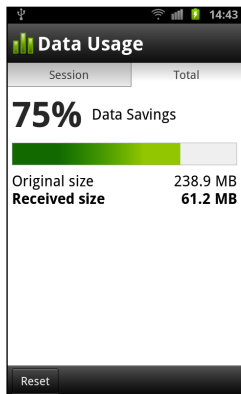

Visual tabs

Visual tabs allow users to multitask by switching quickly between open webpages, using thumbnail previews of each open webpage.

Compression

Opera Mini employs unique proxy-server-based technology that compresses data by up to 90%, decreasing the cost of data transfer for both the operator and their customers.

With the new data-savings page, users can see how much data they actually save when using Opera Mini, allowing them to easily track and control their data usage. Data savings are visualized by percentage and kb and can be viewed in total or per session.

Speed Dial start page

Now users can save more favorites to their Speed Dial than ever before. More than nine Speed Dial thumbnails can be easily accessed from the Opera Mini start pages with just a quick tap.

Bookmarks made easy

Users can effortlessly import previously saved bookmarks into Opera Mini with the touch of a button. Bookmarks can also be saved on the home page, giving users instant access to their favorite websites.

Speed

Opera's streamlined rendering engine and server-side compression allows the Opera Mini browser to load webpages faster than other mobile phone browsers. It is proven to make browsing up to nine times as fast as client-only mobile browsers on both 2/2.5G and 3G networks.

Touch & keypad optimization

Whether using a touchscreen or keypad device, the Opera Mini browser is optimized for smooth, intuitive navigation. The browser comfortably adjusts to the user's needs by switching between portrait and landscape mode and also allows the font size to be adjusted for easier reading. With a touchscreen, the Opera Mini browser makes navigation even easier with pinch-to-zoom and kinetic scrolling.

Extensive language support

The Opera Mini browser is available in approximately 100 languages.

Platforms supported

- Android
- iOS
- Symbian
- Java / J2ME
- BlackBerry
- BMP / BREW
- Mediatek
- Others available upon request

Other features include:
