

# Opera Mobile

The web as you know it

## What is Opera Mobile?

The Opera Mobile™ browser is the perfect fit for today's sophisticated mobile feature phones and smartphones. It is the proven mobile web-browsing solution for the world's best-known OEMs and operators. Including a state-of-the-art user interface, comprehensive web-standards compliance, faster page loads, easier navigation and superior usability, Opera Mobile takes mobile-internet browsing to the next level.

## Enhanced, consistent user experience

With an intuitive UI designed to simplify interactions on both keypad and touchscreen phones, Opera Mobile extends the performance and responsiveness that is characteristic of all Opera Software products, allowing users to enjoy the same great browsing experience and UI across devices.

## Data usage made smarter

The new "smarter" Opera Turbo is automatically enabled when a slow network is detected, giving users a consistently fast browsing experience while extending limited data plans. Together with the new data-savings page, users are empowered with the knowledge of their actual data usage and savings when using Opera Mobile (with Opera Turbo enabled) to browse the mobile web.

## Operators

Opera Mobile is the browser of choice to deliver the same full web-browsing experience, to which users are accustomed on their PCs, to their mobile phones. Built on a cross-platform UI framework, Opera Mobile allows users to experience the best browsing experience across devices, while enabling operators to create a unique, but consistent, web experience across their entire handset portfolios.

## Handset manufacturers/OEMs

With Opera Mobile, every phone is a smartphone. The latest improvements ensure that your device will satisfy the most advanced requirements for web-standards compliance and user experience and will make it easier to address requirements from network operators. The UI can also be customized to best match the look and feel of the device.

## Users

Enjoy a richer, faster experience accessing the full web with your mobile phone. Seize the power of the full desktop browser on your mobile, knowing your experience will be consistent, high speed and connected.

## One user interface, any mobile phone

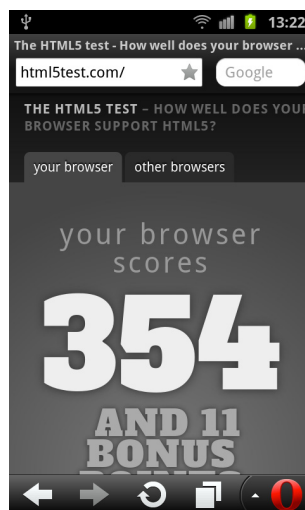

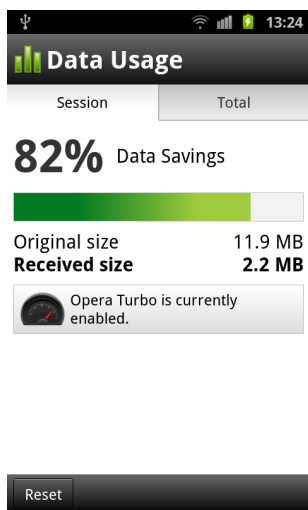

## Features

### Cross-platform UI framework

Our flexible UI framework ensures reusability of customizations, faster time-to-market and a consistent user experience across devices and platforms.

### Smarter browsing

Opera Turbo accelerates the browsing experience by reducing bandwidth consumption by up to 80%. With the new data-savings page, users can now see how much data they actually save when using Opera Mobile with Opera Turbo enabled, allowing them to track and control their data usage easily. Data savings are visualized by percentage and kb and can be viewed in total or per session.

### More power to you

The latest version of Opera Mobile gets a boost from an all-new, supercharged browser engine. That means better HTML5 performance with the new Ragnarök parser and WebGL support for 3D graphics. Graphics of all kinds, including graphics on games, look sharper and brighter, too.

## Speed Dial start page

Users can now add more than nine of their favorite websites to Speed Dial. The Speed Dial entries appear as small, mobile-optimized thumbnails that can be easily accessed with a quick tap. Adding new favorite websites is easy, and users can even synchronize them with their desktop Speed Dial by using Opera Link.

## Opera Link

Opera Link allows users to synchronize their browser preferences including bookmarks, Speed Dials, personal bars, notes, typed browser history and custom searches across multiple devices (PCs, mobile phones).

## Platforms supported

- Android
- Symbian
- BMP / BREW
- Mediatek
- MeeGo
- Others available upon request

## Supported CPU architectures

- ARM
- x86
- MIPS

## Other features include:

- URL auto-completion
- History
- Saved pages (offline viewing)
- Download management
- Find in Page
- Page overview, adaptive zoom
